Portfolio

2013
- Stock Portfolio is a simple stock ticker app for Ubuntu phone and was my first experience with the Ubuntu SDK and Ubuntu Phone environment. https://github.com/lopis/StockPortfolioUbuntu
- As a Student Assistant for an AI course, I developed a Jadex reference page for students to consult while developing their AI projects. http://paginas.fe.up.pt/ ei10009/jadex/doku.php
- TchiRSS is a web app I created as a hobby to easily track changes to my RSS feeds without having to rely on other services. I still make ocasional updates to it. https://github.com/lopis/tchiRSS
- Frown API is a REST web service that powers avatar enabled applications using SVG. https://github.com/lopis/frown

2011
- Guess Me Out is an on-line, social "guess who" mobile game for meeting new people. Game developed for *Android* devices and webservice in *Rails*. This project is no longer active. https://github.com/lopis/Guess-Me-Out
- City Bomber is a location-based game of "bomberman" where players are supposed to kill each other with bombs placed in the field with augmented reality. https://github.com/lopis/citybomber

Miscelaneous Activities

2013
- Cryptography course certified by coursera. https://www.coursera.org/course/crypto

2008 – 2010
- Member and treasurer of the IT club at University of Madeira
